22CDS0426	Mufeed	22cds0426@ms.sab.ac.lk	772046468

2.ACKNOWLEDGMENT

We, as a team, owe sincere gratitude to the Dean of the Faculty, the Head of the Department, and the entire staff at the Department of Data Science, Faculty of Computing, Sabaragamuwa University of Sri Lanka. Their steadfast support and guidance throughout our project have been truly invaluable, and we deeply appreciate their contributions.

Special thanks go to Ms. K.T.D. Padmakumari, the lecturer for Web Programming II, for her expert guidance and invaluable insights throughout the course. Her dedication to our learning and development has been instrumental in the successful completion of this project, and we sincerely appreciate her time and commitment.

Gratitude is also extended to every member of our department for their support and collaboration, fostering a conducive environment for the exchange of ideas that significantly contributed to our growth and development. Our heartfelt thanks are conveyed to everyone mentioned above and all others who supported us during this project.

Thank you.
Sincerely,
Group Members

3.PROJECT INTRODUCTION & OBJECTIVES

3.1 Introduction

In today's academic environment, access to quality study materials plays a crucial role in student success. However, many university students face challenges in obtaining reliable notes, especially when they miss lectures or seek additional resources for exam preparation. While some platforms exist, they are often paid, poorly organized, or not tailored to the specific needs of university learners.

This project proposes the development of an **Online Notes Sharing Platform**, a free and user-friendly web application designed to foster academic collaboration among students. The platform will allow users to upload, download, and discuss study notes in PDF or DOC formats, creating a centralized hub for peer-to-peer learning. By integrating essential features such as user authentication, file management, commenting, and search functionality, the system aims to enhance accessibility, engagement, and knowledge sharing within the university community.

Built using PHP and MySQL with a responsive frontend powered by HTML, CSS, JavaScript, and Bootstrap, this project will serve as a practical and impactful solution to a common academic problem while also providing a strong portfolio piece for web development students.

3.2 Objectives

The main objective of this project is to create a simple and user-friendly online platform where university students can upload and share their study notes in PDF or DOC format. Other students can download the notes, comment, and interact, creating a collaborative learning environment.

4.ANALYSIS

4.1 Feasibility Analysis

4.1.1. Technical Feasibility

- The technologies proposed HTML, CSS, JavaScript, Bootstrap (frontend), PHP (backend), and MySQL (database) are well-established, open-source, and suitable for building a dynamic web application.
- Tools like XAMPP/WAMP and VS Code are freely available and widely used for local development and testing.
- The team has access to sufficient documentation and tutorials (e.g., W3Schools, PHP.net), making implementation achievable with moderate technical skills.

4.1.2. Economic Feasibility

- The project uses free and open-source tools, minimizing software costs.
- Hosting and domain registration may incur minimal expenses, which can be covered by university resources or free-tier services during development.
- No need for paid third-party APIs or services in the initial phase.

4.1.3. Operational Feasibility

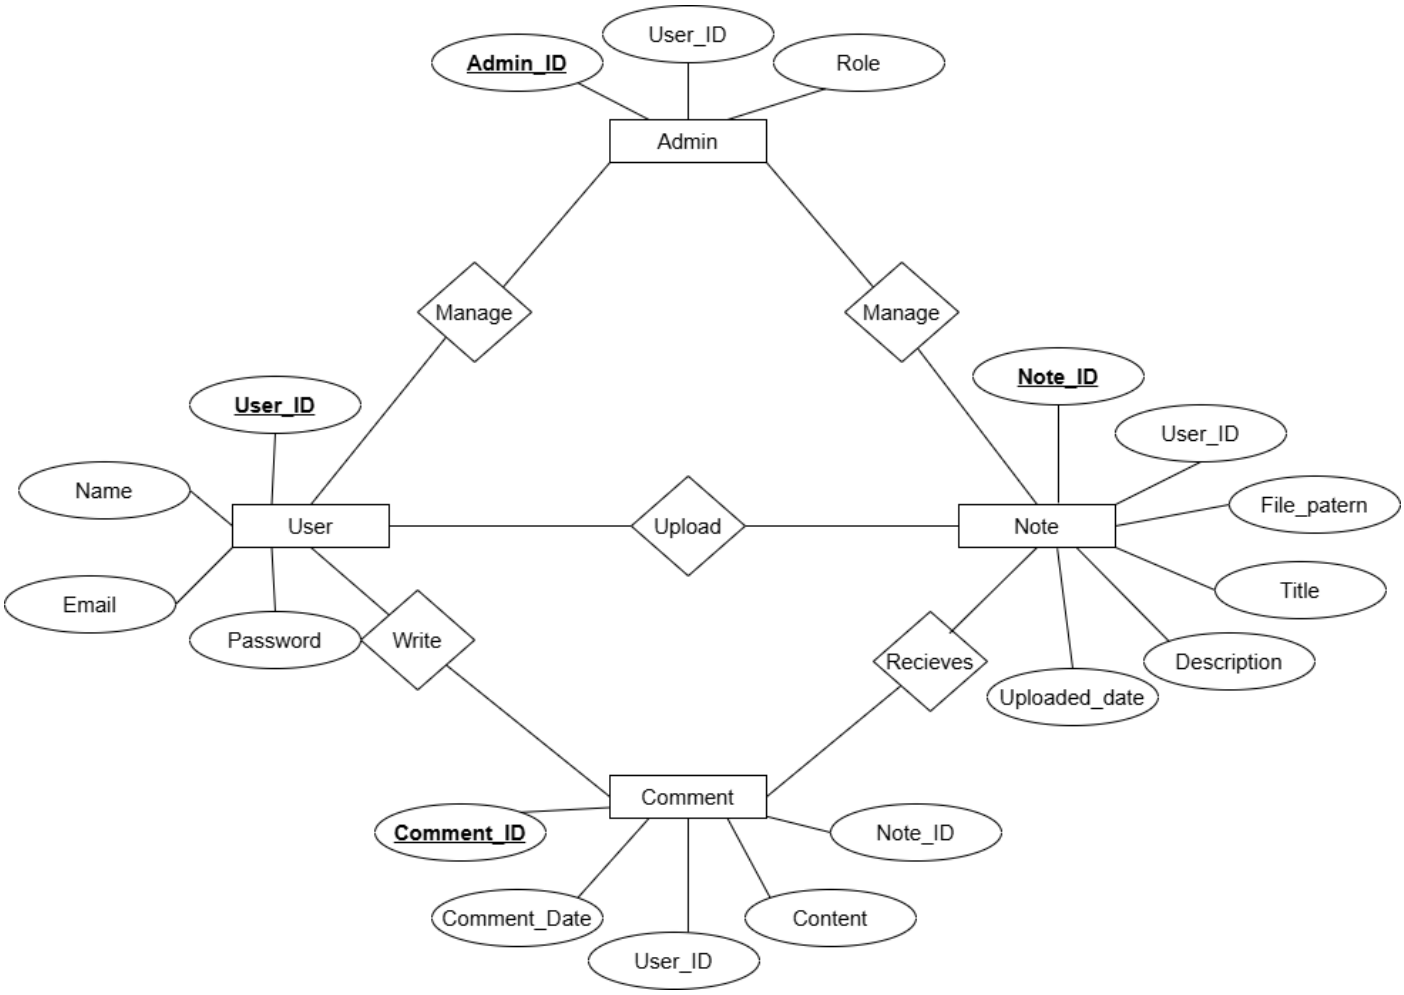

- The platform addresses a real and common problem among university students access to quality study notes.
- The user interface will be simple and intuitive, encouraging adoption and regular use.
- Features like commenting and search/filtering enhance usability and engagement.

4.1.4. Legal and Security Feasibility

- File uploads will be restricted to safe formats (PDF/DOC), and user inputs will be sanitized to prevent SQL injection.
- Passwords will be securely hashed to protect user data.
- The platform will comply with basic data protection principles, though formal legal compliance (e.g., GDPR) may not be required for academic use.

4.2.1 ER Diagrams

5.PROBLEM STATEMENT

Many students find it difficult to access quality notes when they miss lectures or need additional study materials. Existing solutions are either paid or not well-organized. There is a need for a free, easily accessible platform designed specifically for university students to share and find academic resources efficiently.

6.PROPOSED SOLUTION

We propose to develop a web-based platform that allows:

- Students to register and log in securely.
- Uploading of study materials in PDF/DOC formats.
- Downloading notes shared by other students.
- Adding comments under each note to discuss content.
- Searching/filtering notes based on titles or tags.

This will enhance knowledge sharing, peer-to-peer learning, and academic collaboration among students.

7.TECHNOLOGY TO USE

Category	Technologies
Frontend	HTML, CSS, JavaScript, Bootstrap
Backend	PHP
Database	MySQL
Tools	XAMPP / WAMP, VS Code

8.SYSTEM FEATURES

8.1. User Authentication

- Register new user
- Login/Logout system
- Profile management

8.2. Notes Management

- Upload PDF/DOC files with title and description
- View all uploaded notes
- Download notes

8.3. Commenting System

- Post comments on each note
- View existing comments

8.4. Optional Admin Panel

- Manage users and notes
- Remove spam content

9.SYSTEM ARCHITECTURE

1. Frontend (Client-side) – User interacts via HTML, CSS, and JS.
2. Backend (Server-side) – PHP handles requests (upload, download, authentication).
3. Database Layer – MySQL stores users, notes, and comments.

10.PROJECT TIMELINE (Sample)

Task	Duration
Requirement Gathering	1 week
Frontend Design	2 weeks
Backend Development (PHP)	2 weeks
Database Integration	1 week
Testing & Debugging	1 week
Final Report & Presentation	1 week

11.EXPECTED OUTCOMES

- A fully functional notes sharing platform.
- Easy uploading and downloading of study materials.
- Improved collaboration and communication among students.
- A good portfolio-level PHP project for academic evaluation.

12.TARGET USERS

- University students
- Lecturers (optional)
- Academic clubs or study groups

13.SECURITY CONSIDERATION

- Validate file uploads (only allowed formats).
- Sanitize user input to prevent SQL injection.
- Passwords stored with hashing.
